Press Release

S band transmitter highlighted by TMD at ATC Global show

TMD Technologies will be highlighting their PTX7602 S-band transmitter at the ATC Global exhibition in Amsterdam in March 2009. This complete S band transmitter for commercial or military air traffic control includes enhanced features and user benefits.

TMD's extensive experience in the development and manufacture of high performance transmitters for aerospace applications, where space is at a premium, enabled the company to produce an extremely compact, modular design.

Unlike earlier TWT (travelling wave tube) based systems, the power supply for the PTX7602 is built up of a series of separate in-service line replacement units (LRUs) combined within a standard 19 inch rack. The high voltage sections within each unit are encapsulated in a silicon based compound, resulting in a clean, environmentally friendly oil free transmitter.

TMD can be found on stand H513 at the ATC Global exhibition, which takes place at the RAI Centre in Amsterdam from 17 to 19 March 2009.

Notes for editors

About TMD Technologies

TMD Technologies is one of the world's leading designers and manufacturers of specialised transmitters for radar and electronic warfare applications, high voltage power supplies and microwave tubes. The multiple Queen's Award winning company also produces a range of advanced commercial microwave amplifiers for EMC testing and scientific applications.

All the UK company's operational activities are carried out at its West London premises, helping to ensure a smooth transition between development and production.
