Press Release

TMD offers joint solutions at ATC Global show

TMD Technologies will be highlighting its innovative PTX7602 S-band transmitter at the ATC Global exhibition in Amsterdam in March 2010. This complete S band transmitter for commercial or military air traffic control includes enhanced features and user benefits.

TMD's extensive experience in the development and manufacture of high performance transmitters for aerospace applications, where space is at a premium, enabled the company to produce an extremely compact, modular design.

To further broaden its ATC capabilities, TMD has been working with C Speed, the US developer and manufacturer of state-of-the-art radar receivers and signal processors. This cooperation brings together some of the finest ATC terminal radar skill sets worldwide, with the ability to offer bespoke solutions internationally.

The combined team offers custom-built radar upgrades with form, fit and function replacement for Watchman radar, as well as upgrades or replacements for similar radar systems, or new build, at highly competitive prices.

TMD Technologies is a world leader in the design and manufacture of microwave amplifiers, transmitters, tubes and high voltage power supplies for radar, EW, communications and laboratory applications. The West London based company has been active in ATC radar for over 30 years.

TMD can be found on stand H513 at the ATC Global exhibition, which takes place at the RAI Centre in Amsterdam from 9 to 11 March 2010.
