TMD goes 'even greener'

- a switch to electric cars reduces air pollution and cuts costs.

Following a recent major installation of solar panels on the roof of its headquarters building in Hayes, West London, TMD Technologies Limited (TMD), world class, independent company in the microwave and RF field, is now replacing its conventional petrol driven corporate car fleet with environment friendly electric vehicles (EVs).

TMD's board directors have already taken the lead, with several already driving fully electric vehicles. Some staff are driving plug-in hybrids, and the aim is to switch to an all-electric fleet as it is renewed.

Greener living - TMD changes its corporate car fleet to cleaner-air electric models.

Better for the environment – and efficiency!

EVs have no exhaust emissions, with the potential to significantly reduce harmful air pollution in busy towns, and particularly in major cities like London. Furthermore, they can be as much as 400 to 600 percent more efficient than petrol driven models, and are quieter to drive.

Dave Brown, TMD's Managing Director said: "As a responsible, forward looking manufacturer we pride ourselves on being part of the 'green living' society. We have always been prepared to embrace the latest pioneering technology when beneficial, and by switching to EVs we are not only promoting cleaner air but also cutting costs to become an even more efficient company. EVs have far less moving parts than the conventional petrol/diesel cars and are less costly to maintain. With corporate car fleets currently accounting for more than 50 percent of new car sales, the 'greenness' of the company car is very important to eco growth and sustainability."

Dave Brown continued by saying: "We have installed five charging points at our headquarters in Hayes. The electricity to charge an EV works out about one third of the cost of buying petrol for a similar car - and we have already reduced our electricity costs with the installation of our environmentally friendly solar panels. So, reduced pollution and even lower costs - everyone's a winner!"

TMD Technologies Limited – More than 20 years at the top!

TMD Technologies Ltd is one of the world's leading designers and manufacturers of specialised transmitters, amplifiers, microwave power modules (MPMs), high voltage power supplies and microwave tubes for radar, EW and communications applications. The multiple Queen's Award winning company also produces a range of advanced instrumentation microwave amplifiers for EMC testing, scientific and medical applications.

TMD Technologies, LLC, USA

TMD Technologies, LLC is the US subsidiary of TMD Technologies Ltd, set up in Baltimore, Maryland in 2013; its purpose being to provide excellent commercial and technical support to TMD's customers in the USA. The company is now well established, the product repair and service centre is up and running and its Sales and Marketing Department is engaged in new business development in the USA - for the whole range of TMD's products.
